

# INTEGRATED DATA REDUCTION AND SECURITY

Data volumes increase at an average of 30-70% per year, continuously adding to the strain on networks, increasing storage costs, creating higher transmission fees and compounding risk factors.

Exponential growth in enterprise electronic data, demands on data retention periods, and an increased cost focus have led to a "perfect storm" in data proliferation.

PKWARE is the only provider of the critical components for data reduction to control sprawl and data aggregation, while securing, moving, and storing data across the extended enterprise, both internally and externally.

Smartcrypt, PKWARE's platform neutral data encryption solution, applies persistent data-level protection while compressing files to reduce data related costs by up to 15%.

For more than thirty years, PKWARE has provided the most efficient and effective total data management solutions for empowering enterprises, the public sector and end users.

## Data Center Challenges

### MEETING SLAs/SLOs

Sending huge amounts of information, over an already taxed infrastructure, with critical transmission times associated with operational and service level agreements, often requires upgrades and investments to maintain.

### TRANSMISSION TIMES

Strained data pipes and maxed out bandwidth significantly increase elapsed time for running data processing and data transfer processes, adding to overall cost and performance issues.

### NON-COMPLIANCE PENALTIES

Extended enterprises, partner networks and virtual machines are continuously scrutinized for compliance. All sensitive data must be protected with appropriate measures.

## Smart Solutions

### SERVICE DELIVERY ASSURANCE

Smartcrypt helps prevent unmet terms of Service Level Agreements by reducing elapsed time up to 90%. This allows fault resend with no penalty; decreasing the number of transmissions and potential for failure rates by placing multiple files in a single secure container; and cutting prep time of file batches with simplified consolidation of logical data.

### INCREASED SPEED

Lower IT infrastructure costs across every platform and reduce your overall data footprint by up to 95%, allowing more data to be transmitted faster without increased bandwidth.

### MANAGED RISK

Mitigate the inherent costs of security breaches and information theft while complying with industry mandates and government regulations such as PCI, HIPAA/HITECH Act, EU Privacy Act and FIPS 140.

Results show that within the first 12 months, customers can easily recoup their initial investment with up to 40x in cost savings.

## Data Center Challenges

## Smart Solutions

### EXPOSURE

A security breach as well as lost, stolen or even compromised records triggers negative exposure that quickly equates to forfeited sales, legal fees, disclosure expenses and a host of remediation costs.

### BRAND ASSURANCE

Guaranteed file level security protects sensitive information in the event that data is lost, stolen or compromised; protecting your brand and avoiding remediation costs related to a data breach.

### INFRASTRUCTURE COSTS

IT capital and operating costs in the data center are rising due to requirements for storage, more bandwidth and added costs to maintain multiple point solutions intended for data management. Large files create network bottle necks, stress systems and slow application performance for further indirect costs.

### REDUCED COSTS

Lower IT infrastructure costs across every platform with a single solution for reducing, securing, moving and storing data. More data is transmitted faster without increased bandwidth or the burden and costs associated with additional storage uptake.

### ESCALATING STORAGE NEEDS

A never before seen plethora of structured and unstructured data and sprawl is crippling storage capacity and requiring significant expenditures to manage and move that data.

### OPTIMIZED STORAGE

Smartcrypt can reduce the size of data by up to 95% and thus storage costs up to 95%. One solution, not several point products, handles structured and unstructured data for immediate access across your extended enterprise.

### SECURITY THREATS

Files that contain sensitive data, whether stored or being transmitted, need to be protected. Data that moves across disparate computing environments is at increased risk of misuse, loss or theft.

### DATA CENTRIC SECURITY

Smartcrypt protects with persistent file-level security independent of system, application or data format and while, at rest or in motion. Smartcrypt renders data unusable to anyone that does not have the key to decrypt it and ensures data integrity even when lost or stolen.

## Data Center Challenges

### DATA TRANSFER

Information traveling across computing platforms and into virtual environments is at risk for exposure. Multiple independent solutions that function on a single platform or combined point solutions from multiple vendors can't guarantee that data is protected as it moves between computing platforms.

## Smart Solutions

### INTEGRATED INTEROPERABILITY

Leverage a single solution to move and manage data from across platforms. PKWARE securely moves mainframe and virtual data from servers onto the desktop at no incremental cost and provides a consistent set of file security applications for HP-UX, Linux, Solaris, AIX, and multiple other environments.

PKWARE is a trusted leader in global business data protection. For three decades PKWARE has focused on data. Building on our compression expertise with the latest encryption technology, PKWARE protects data for over 35,000 customers, including government agencies and global corporations. Our software-defined solutions provide cost-effective and easy-to-implement protection that is transparent to end users and simple for IT to administer and control.
