

# CONSOLIDATING DATA FROM DISPARATE SYSTEMS WITH SMARTCRYPT

As it acquires new businesses or combines existing business units, your organization may encounter a need to consolidate data across enterprise computing platforms. The integration process must meet internal policies, industry regulations, and government mandates. You need a solution that can effectively and efficiently handle data consolidation, while offering strong security you can depend on.

## Secure sensitive information and conserve storage space.

By protecting and compressing data, Smartcrypt helps banking and financial services organizations tackle the challenge of efficient data consolidation. Storage space is conserved. Sensitive information is secure. All without added infrastructure costs for you or your IT partners.

### Your Unique Challenges

Major organizational changes, including mergers and acquisitions, require data to be consolidated from disparate computing platforms.

Conversion and transfer of large amounts of information for data consolidation is extremely expensive and time consuming.

Internal policies, industry regulations, and government mandates require the protection of sensitive data during the consolidation process.

Licensing products for both long and short-term data conversion projects is costly.

### Our Unique Solutions

Smartcrypt is the only data compression and security solution that is truly interoperable. Exchange data across all major enterprise computing platforms.

Smartcrypt reduces processing times up to 40% or more, reduces storage requirements up to 95%, and provides automatic file conversion. Eliminate data conversion costs.

Smartcrypt can restrict access to data at the server/application level by enforcing internal data security policies. In addition, it can prevent access to data at the file level by applying strong encryption to ensure it is only accessible by authorized individuals.

Smartcrypt is delivered in both a perpetual and term licensing model.

## Smartcrypt at a glance

### Reduce conversion costs of multi-platform data exchange

Smartcrypt works across all platforms and into virtual and cloud environments.

### Lower IT infrastructure costs

Reducing file size up to 95% accelerates transmission times & improves processing efficiency, lowering costs.

### Exceed compliance requirements

Ensure the secure exchange of PII to meet industry mandates and regulations. Avoid the risk of fees and penalties.

### Securely signed, sealed, & delivered

Encrypt files using passphrases, X.509 digital certificates, or OpenPGP keys. Ensure data integrity with digital signatures.
