

MANAGING ELECTRONIC RECORDS AND INCREASED REGULATIONS WITH SMARTCRYPT

As a healthcare organization, you are confronted with staggering volumes of PHI, PII, and other sensitive data. The aggressive push towards electronic records management, combined with patient information privacy laws, has placed your IT infrastructure under enormous pressure. You need a flexible solution that can handle the vast amount of data, while offering federally compliant strong security you can depend on.

Secure PHI and enable business growth

Doing business with government agencies means you have to comply with increasingly stringent security standards and requirements. Smartcrypt meets the encryption standards and regulations mandated by the U.S. government. Sensitive information is secure and the risk of lost revenue is eliminated.

Your Unique Challenges

Compliance requirements for HIPAA and the HITECH Act demand a comprehensive plan for audit and data privacy. Non-compliance results in considerable fines and penalties – up to \$50,000 per individual violation.

Doing business with government agencies means you have to comply with increasingly stringent security standards and requirements.

The sheer volume and size of medical records is overwhelming. Finding enough space in your existing infrastructure to store all that data is becoming increasingly difficult.

Information needs to be exchanged with hospitals, pharmacies, claims processors, insurance providers, etc. Exchanging information with multiple external business partners and customers results in multiple headaches.

Our Unique Solutions

Smartcrypt ensures access to data across your organization. Enforce data security policies and ensure data availability without fearing the auditors. Eliminate the risks of a data breach such as substantial fines, negative publicity, and damage to your reputation.

Smartcrypt meets the encryption standards and requirements mandated by FIPS 140 and OMB M-06-16, allowing you to drive revenue by working with government agencies. Continue business as usual.

Smartcrypt not only protects your data, it also reduces required storage space up to 98%. Eliminate the need to purchase additional storage.

Smartcrypt allows you to share information seamlessly with external partners without impacting their budgets. Increase partner acceptance. Minimize IT standardization costs.

Smartcrypt at a glance

Exceed compliance requirements.

Ensure the secure exchange of PHI & PII to meet government mandates and regulations.

Securely signed, sealed, and delivered.

Encrypt files using passphrases, X.509 digital certificates, or both. Ensure data integrity with digital signatures.

Reduce IT infrastructure costs.

Reducing file size up to 98% accelerates transmission times and improves processing efficiency, resulting in decreased costs.

Eliminate conversion costs of multi-platform data exchange.

Smartcrypt works across all major enterprise computing platforms. Increase partner acceptance & accelerate deployments.
